

PFAS Statement

11/17/2025

At Dynaquip Controls, we are committed to promoting safety, sustainability, and environmental stewardship in our business operations. We recognize the growing concerns about Per- and Polyfluoroalkyl Substances (PFAS), commonly known as “forever chemicals,” due to their persistence in the environment and potential health impacts.

In some of our products, the use of PTFE (polytetrafluoroethylene) and FFKM (perfluoroelastomer) is necessary due to their unique properties, which contribute to the durability, reliability, and safety of our solutions. These materials, not manufactured by DynaQuip, enable us to meet demanding industry standards and provide superior performance where alternative materials may not suffice. However, we are committed to utilizing these substances responsibly and at levels that meet or exceed current regulatory guidelines.

While PTFE falls under the broad chemical definition of PFAS, its physical and toxicological properties are distinct, and it is not generally considered to pose the same health risks as the more problematic, non-polymeric PFAS compounds.

We work closely with our suppliers to ensure they share our commitment to reducing the use of hazardous substances, and we continuously evaluate our products and manufacturing processes to align with environmental best practices. Our goal is to provide high-quality products that meet the needs of our customers without compromising the well-being of our communities and the environment.

At Dynaquip Controls, safety and innovation go hand in hand, and we remain dedicated to creating solutions that support a sustainable future.
