

U.S. TSCA Compliance Statement

Effective date: August 3, 2026

Purpose and scope

This statement addresses U.S. Toxic Substances Control Act (TSCA) restrictions relevant to finished DynaQuip catalog products, including the five persistent, bioaccumulative and toxic (PBT) chemicals regulated under TSCA section 6(h). It applies to all DynaQuip catalog products and accessories unless a product-specific declaration states otherwise.

The TSCA Chemical Substance Inventory is a list of existing chemical substances in U.S. commerce; it is **not** a list of prohibited substances. Presence of a substance on the Inventory does not, by itself, make a product noncompliant. Likewise, lead is not universally prohibited in all finished articles under TSCA. Compliance must be evaluated against the specific restriction, condition of use, threshold, exclusion and compliance date that applies.

Product declaration

Based on supplier declarations, material information and other records reasonably available to DynaQuip, the covered finished products do not intentionally contain and are not known to contain any of the five TSCA section 6(h) PBT chemicals in a manner prohibited by 40 CFR Part 751. The covered products are also not known to contain asbestos or polychlorinated biphenyls (PCBs).

TSCA §6(h) chemical	CAS RN	Current product-related rule summary	DynaQuip status
Decabromodiphenyl ether (decaBDE)	1163-19-5	Generally prohibited, subject to exclusions/phase-outs; 0.1% threshold for unintentional amounts	Not intentionally added or known to be present
Phenol, isopropylated phosphate (3:1) [PIP (3:1)]	68937-41-7	Generally prohibited, subject to exclusions/phase-outs; 0.1% threshold for unintentional amounts	Not intentionally added or known to be present
2,4,6-Tris(tert-butyl)phenol (2,4,6-TTBP)	732-26-3	0.3% limit for specified fuel, oil and lubricant additive uses	Not intentionally added or known to be present
Hexachlorobutadiene (HCBd)	87-68-3	Manufacture, processing and distribution prohibited, with limited byproduct/waste-fuel exception	Not intentionally added or known to be present
Pentachlorothiophenol (PCTP)	133-49-3	Manufacture, processing and distribution prohibited above 1% by weight	Not intentionally added or known to be present

Latest rule updates reflected

EPA's 2024 amendments to the decaBDE and PIP (3:1) rules added a 0.1% by-weight threshold for unintentional amounts in products and articles, revised exclusions and phase-out dates, and added workplace protection, water-release and five-year recordkeeping requirements for covered activities. PIP (3:1)-containing articles not otherwise excluded or subject to a later phase-out generally may not be distributed in commerce after October 31, 2026.

EPA has also issued separate condition-of-use rules for chemicals such as methylene chloride, trichloroethylene, perchloroethylene, carbon tetrachloride and chrysotile asbestos. Those rules may govern manufacturing, processing, industrial/commercial use, workplace controls or specific products. DynaQuip does not intentionally add these solvents to its finished articles. Facility and process compliance is managed separately and is outside this product-content declaration.

Basis, import certification and limitations

This declaration is based on supplier information, material declarations, specifications and records reasonably available as of the effective date; it does not represent universal analytical testing. It is not a substitute for a TSCA section 13 import certification, which must be completed by the responsible importer when required, or for a product- and transaction-specific review of current EPA rules. DynaQuip will review regulatory and supplier updates and revise this statement as appropriate.
